

# Mapping Inheritance – Table per Hierarchy

---

**Torben Jensen**

Developer/Cloud Architect

# Overview

**Table-per-Hierarchy**

**Table-per-Type**

**Table-per-Concrete-Type**

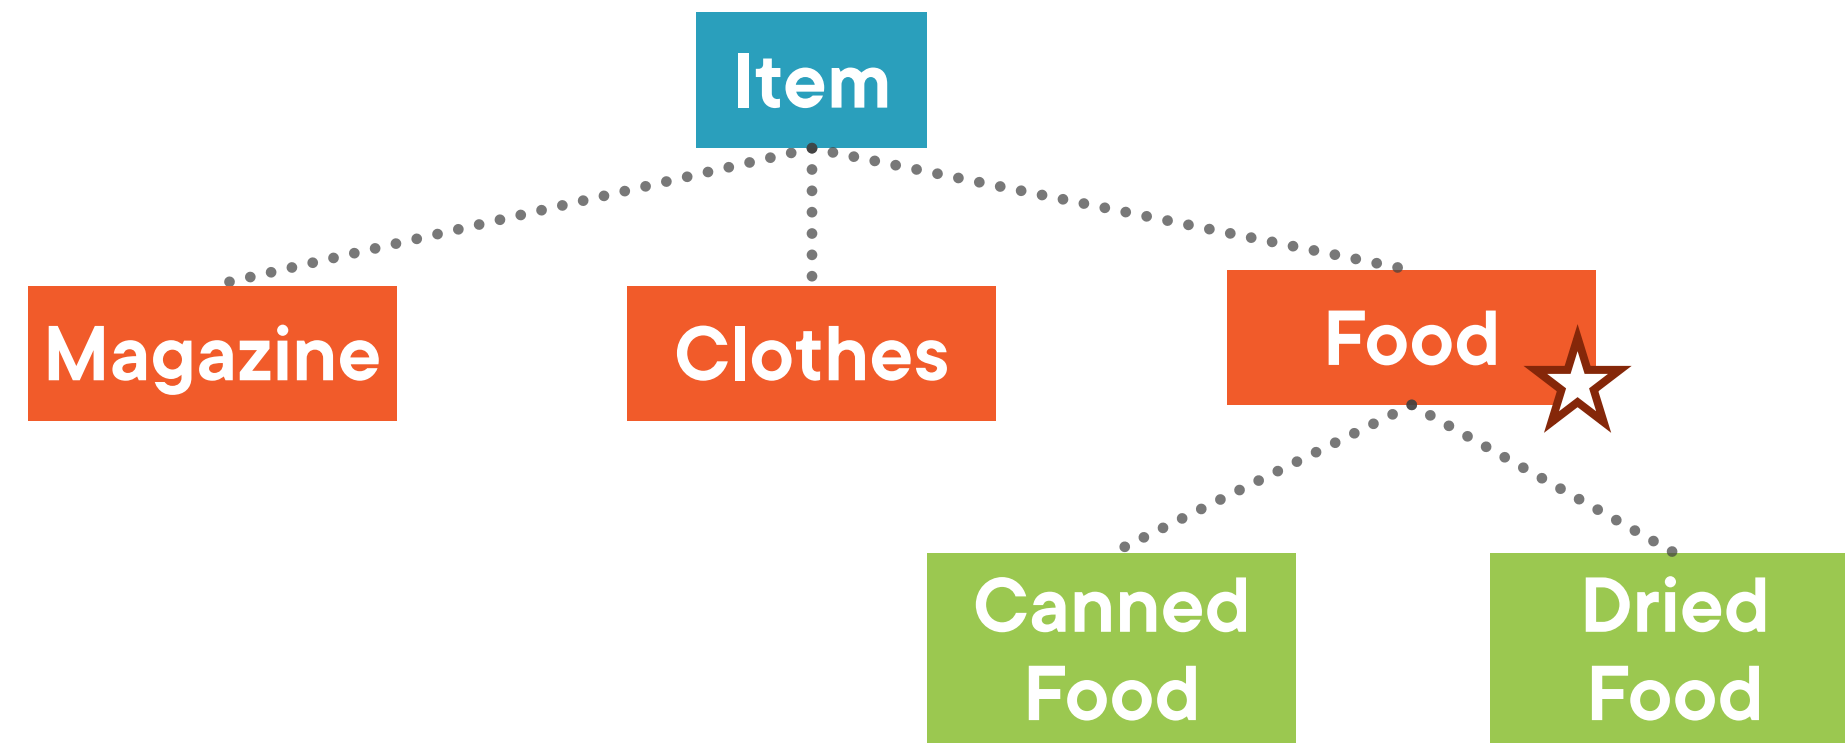

## TPH, TPT, and TPC Inheritance mapping with EF Core

<https://www.youtube.com/watch?v=HaL6DKW1mrg>

.NET Data Community Standup

# New Items Model

Mapping Strategy

# Table-per-Hierarchy

**All types in hierarchy in one table**

**EF Core's default**

**Discriminator column specifies type**

# Discriminator

**We can configure type, name, values**

**Or let EF Core create the discriminator for us**

**Set up using Fluent API**

**Either implicitly as shadow property**

**Or explicitly as property on base entity**

# Things to Note

**Leads to empty columns**

**SQL Server sparse columns**

**Changes in type hierarchy requires update of entity table**

**Sibling entities can be mapped to shared columns**

**Only types which are part of our data model are mapped – this goes for all three strategies**

# Interpreting Our Model with Table-per-hierarchy

Table-per-Hierarchy

Id		Description	UnitPrice	UnitWeight	CanningMaterial	DateOfExpiry	Fabric	ProductionDate	PublicationFrequency	ItemTypeDiscriminator
1027		Canned Tomato Soup	10	5	Steel	29-11-2025	NULL	29-11-2021	NULL	CannedFoodItem
1028		Hiking Shoes	40	15	NULL	NULL	Leather	NULL	NULL	ClothesItem
1029		Dried Tomato Soup	7	3	NULL	29-11-2032	NULL	29-11-2021	NULL	DriedFoodItem
1030		Knotting Rope	3	2	NULL	NULL	NULL	NULL	NULL	UncategorizedItem
1031		Climber's Quarterly	15	2	NULL	NULL	NULL	NULL	Quarterly	MagazineItem

# Demo

## Configuring the Table-per-Hierarchy strategy

# Demo

## Interacting with the Table-per-Hierarchy strategy

# What Did We Just Do?

**Mapped model to the database**

**Using Table-per-Hierarchy**

**Added entries to the items table**

**Fetches derived entities**

**Explored generated SQL statements**

# Summary

**Mapping inheritance**

**Table-per-Hierarchy**

**Maps inheritance hierarchy to a single table**
